Monticello, AR ~ 12/5/2009

REPORT OF INVESTIGATION

December 2009 Moon Phases

Information/History of Location

6000 Sq. Ft.

5 bedrooms, Living Room, Dining Room, Dogs Room, 2 Kitchens, 3 Baths, Laundry Room, 2 Foyers

Fully Floor Walk-Up Attic

Built in 1920

Owned location for two (2) years

Reported Activity By Homeowners

The homeowners often hear banging noises, footsteps, and see shadows. They have heard what sounds like a ball bouncing down the stairs, things falling down, furniture moving around, and knocking noises. When they first moved in, they had boxes stacked up in the living room and they were knocked over and lined up in a straight line. A picture flew off the wall and landed in front of the TV. The dog plays with 'something' upstairs in the Foyer. There are two figurines in the front living room that will move. They face each other most of the time. When homeowners fight, the figurines will have their backs to each other. The child has heard footsteps in her room and something sighed while standing by her bed. Female homeowner was painting the door in the dining room that goes into the living room and something was pushing against the door so she could not close it. They did not get an attic key when they bought the house. The attic key showed up in child's floor one night. They don't feel threatened by the 'spirits' here.

Recent Remodeling/Work Done To Location:

The homeowners remodeled the upstairs bedroom back into a balcony. Remodeled Kitchen and painted some of the rooms in the house.

Notes About The Location:

The wiring in the attic has the old cloth wiring that was sliced into new wiring. We noticed that a lot of the plugs had power strips. There is an Urn with the child's mom's ashes in the Master Bedroom above the fireplace.

Researchers Present

Larry Flaxman – President

Amanda Dinwiddie – Case Manager/Research Data Director

April Fales – Secretary/Treasurer

Joel Hutsell – Historian

Marc Diaz – Researcher

Jody Fields – Researcher

Investigation Summary

Investigation Time: 7:00 pm –1:00 am

5 Night Vision Cameras were set up

Kestrel, EMFs, Air Ion Counter, DustCheck & Carbon Monoxide Equipment was used to check baselines.

3 Rotations were done.

Rooms Investigated: Downstairs Front Room, Master Bedroom, and Child's Bedroom.

Camera Set Up:

Camera 1- Dining Room facing up the stairs

Camera 2 - Upstairs Hallway facing down the stairs

Camera 3 – Upstairs Foyer

Camera 4 – Child's Room

Camera 5 – Dining Room

Summary of Investigation

Number of Digital Pictures Taken: 296

Minutes of Audio Used: 638 Minutes = 10 Hours and 38 Minutes

Minutes of Video Taken: 3hrs x 5 cameras = 15 Hours

Number of Positive Photos: None

Number of EVPs Recorded: 3 possible evps

Audio Findings

There were three evps captured on the digital recorders. All three evps were captured in Child's Room.

1. "Yep" – Amanda, April and child were in the Child's Room talking about the high emfs and April was explaining how she gets dizzy and a headache occurs around high emfs. She then stated she was starting to feel dizzy and a voice said 'yep' was captured on the digital voice recorder. The voice was not Amanda or the child's.
2. "Scratches on the Door" – Larry and April were upstairs in the attic looking at the wiring for the house. Amanda and the child were sitting on the bed when they heard a scratching noise on the bedroom door. There was nobody on the 2nd story foyer.
3. "Doorknob Rattling and Footsteps" - April and Larry were still up in the attic looking at old newspapers. Amanda and the child were sitting in child's room when they heard the

doorknob rattle. The digital recorder captured footsteps right after Amanda said heard

doorknob rattle. There was nobody walking around in the room or in the attic.

Video Findings

Five (8) 0-lux IR (infrared) night-vision 520lpi Sony CCD cameras were deployed throughout the location.

Recording was slightly 3 hours (x 5 cameras = 15 hours of total footage.) No definitive video evidence was recovered at the investigation site.

Photo Findings

No definitive photographic evidence was recovered at this location.

Experiments

No experiments were conducted on this location.

Personal Experiences by Investigators Present

Cameras kept shutting off by themselves. One camera took a picture while sitting on the bed with nobody around it. Marc thought his arm was touched while walking from dining room into master bedroom.

During second rotation, April was sitting on the bed in the child's room and reported that she felt like someone had sat down beside her on the bed. Amanda had the FLIR thermal image camera and she saw what appeared to be a pair of legs standing against the edge of the bed. Nobody had been standing in the area on this side of the bed to produce thermal heat image on the bed. Later, Amanda was sitting on bed and felt like someone was bumping the bed. A few minutes later, Amanda felt like someone was touching her hair. Right after that is when she heard the scratches at the door and doorknob rattle.

Conclusion

Baselines were normal except for high EMF readings due to out-of-date wiring.

The investigation of this location was extremely interesting. The team felt that due to the number of personal experiences and the three EVPs captured, further investigation is warranted.
